Supplementary: Synthetic generation and transfer to measured scans

Synthetic-trained C=1 and scan-trained C=1 checkpoints; the latter was selected on high-half spatial validation (not an independent test). Shared anchor, common illuminated mask and border; LSQ-ML100 (C1) is rescored on native objects. Gold TP2 is full-field, with no zoom. Gold TP2 FRC excluded because of scan-grid artefacts; historical source values preserved.
