
CNN and training/pitch sweeps are C1; no C4 sweep evidence. Held-out high half is checkpoint-selection spatial validation, not an independent test; no guardband.
240-frame TP2 point unavailable; five grey-band x marks are unscored by fixed-region audit (not LSQ or quality).
S200 FRC ratio undefined (LSQ-ML100 FRC50 = 0). TP2 FRC excluded because of scan-grid artefacts; historical source values preserved.
